

KITCHEN COUNTERTOPS

- **Clean regularly:** The more your countertops are used, the more they need to be cleaned. If you clean your countertops regularly, you can avoid heavy scrubbing because the grim won't build up. If you practice this habit, you won't need us anytime soon.
- **Use mild cleaners:** We recommend Dawn dish soap. Avoid cleaners that are abrasive, gritty (Comet, Ajax, etc.), and/or acidic (Scrubbing bubbles, Soft Scrub, homes remedies with vinegar, etc.). Also, avoid cleaning with abrasive pads (SOS Pads, etc.).
- **Always use hot pads and cutting boards:** In other words, never place hot items directly on your countertops.
- **Remove chemicals from the surface ASAP:** Stains caused by hair dyes or chemicals may occur. Remove these solutions from the surface immediately to avoid staining.
- **Do not keep water-trapping materials on countertops:** Items like sponges, soap containers, etc. can trap water, damaging the finish of countertops. Find another place to keep these items to avoid accelerating the wear on your countertops.
