

- **Use mild cleaners:** We recommend Dawn dish soap. Avoid cleaners that are abrasive, gritty (Comet, Ajax, etc.), and/or acidic (Scrubbing bubbles, Soft Scrub, home remedies with vinegar, etc.). Also, avoid cleaning with abrasive pads (SOS Pads, etc.).
- **Don't set toiletries where they can trap water:** Water will work its way through anything. Rock, metal, etc. It will do the same to your tub. Use the shower head hanging baskets or a special wire rack that does not sit or seal to any surface water can work underneath.
- **Don't use bath mats in tubs:** These mats keep us in business because they trap water. When you step on the mat, the water is forced out from under it, causing the water to carve into your bathtub. Within months to years, this will wear and ruin a surface.
- **Don't use non-slip stickers in tubs:** These stickers will leave marks on your tub. After the stickers lose their adhesive, they peel off, leaving behind an area that hasn't worn with use like the rest of the tub. For example, if you pull the fish sticker off of the tub, you'll still see a fish on the bottom of your bathtub.
- **Clean any chemicals that spill on your tub ASAP:** Don't let chemicals like Goof-Off, bleaches, hair dye, etc. remain on your tub for any extended period of time.
